

Four Gunmen Said Involved In JFK Killing

NEW YORK (UPI) — A computer specialist said in an analysis published Friday that at least four gunmen firing from different sites participated in the assassination of President John F. Kennedy.

Richard E. Sprague, writing in the May issue of "Computers and Automation," said none of the gunmen was Lee Harvey Oswald, the man named by the Warren Commission as the lone assassin.

Sprague, president of Personal Data Service, Hartsdale, N.Y., said the assassination was the result of a conspiracy involving more than 50 persons, including some Dallas policemen and elements of the CIA.

He told a news conference at the Statler Hilton Hotel his conclusions were based on a partially completed computerized analysis of over 300 photographs and 20,000 frames of movie sequences of the assassination.

Sprague said that although the assassination of President Kennedy was "the most photographed murder in history," with 500 still photographs available, the Warren Commission only looked at 28.
